

### JHB477 design detail

This is an in the hoop project and each wrap has three panels which you then assemble on your normal sewing machine. The wrap gets closed with some Velcro strips which are added in your embroidery machine. This wrap fits around a 2 ply 250 sheet roll 14 inches (36 cm) around and 4 inches (10 cm) high. There are two wraps in this set. The one wrap has a camper on the front panel and the other has a tent, both done in applique. The one set of back panels has got wording and little flower embroidery detail and the other has quilting detail. The back panels can be used with either front panel. Once you have wrapped up your TP roll, remove the inside cardboard roll and you use your roll from the inside out, so you do not have to undo the wrap everytime you need paper. The wrap will hold the roll together right to the end of the roll.
